DETAILED ACTION

Allowable Subject Matter

Claims 1-16 and 18-23 are allowed.

The following is an examiner's statement of reasons for allowance: The claims feature a communication system comprising an information server performing communication in first and second modes (where modes are exemplified as mechanisms through which data is obtained through a network. For example, one mode may have faster download rate than another, and/or modes may differ by billing options, where one mode may bill by communication time, and the other by the amount of data downloaded). A communication apparatus, applied as an integrated unit (and not as a unit disposed between a client and server), is capable of performing communication with the information server in the first and second modes to receive information sent from the server in response to a request generated by the communication apparatus and sent to the server. Further, there exists an output device for outputting the information received from the server, a connection information storage section, and a communication mode switching control section. The communication mode switching control section controls the switching of the modes with the server from the first mode to the second mode by storing connection information into the connection information storage section. Connection information is based on a condition of communication connection of the communication apparatus and the server in the first mode (where the condition is exemplified by the amount of information to be received from the server, or the type of information to be received, etc). At the time of a switch, the connection

Page 3

(in the first mode) between the apparatus and server is released, where communication in the second mode is not established. Communication in the second mode is then established, without there being established communication in the first mode, and the communication connection condition (for the first mode) can be restored based on the stored connection information. Because communication may switch between different communication modes through the stored connection information based on a condition of communication connection, it is believed that the claimed invention is novel. Examiner was unable to procure prior teachings of such features as claimed and could not render said features obvious to one of ordinary skill in the art, without the use of impermissible hindsight constructions. Additionally, Applicant's remarks regarding the claims and the provided prior art references' deficiencies are persuasive, in that none of the references taken singly, or in combination, teach the claimed features. It is therefore the examiner's belief that the claimed invention does indeed possess novelty.

Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee, and to avoid processing delays, should preferably accompany the issue fee. Such submissions should clearly be labeled "Comments on Statement of Reasons for Allowance."

Conclusion

Any inquiry concerning this communication or earlier communications from the examiner should be directed to Tanim Hossain whose telephone number is 571/272-3881. The examiner can normally be reached on 8:30 am - 5 pm.

Application/Control Number: 09/901,125

Art Unit: 2145

If attempts to reach the examiner by telephone are unsuccessful, the examiner's supervisor, Jason Cardone can be reached on 571/272-3933. The fax phone number for the organization where this application or proceeding is assigned is 571-273-8300.

Information regarding the status of an application may be obtained from the Patent Application Information Retrieval (PAIR) system. Status information for published applications may be obtained from either Private PAIR or Public PAIR. Status information for unpublished applications is available through Private PAIR only. For more information about the PAIR system, see http://pair-direct.uspto.gov. Should you have questions on access to the Private PAIR system, contact the Electronic Business Center (EBC) at 866-217-9197 (toll-free). If you would like assistance from a USPTO Customer Service Representative or access to the automated information system, call 800-786-9199 (IN USA OR CANADA) or 571-272-1000.
